NMK206 - Computer Architecture

This course is *Computer Architecture*, offered by the Faculty of Electronics Engineering & Technology (FKTEN) for Electronic Engineering Technology programs.

Download ModelSim 20.1.1.720 (Intel FPGA Starter Edition) setup (SHA-1 checksum). Linux users can try this (SHA-1 checksum).

Announcements

[20250323] Welcome to NMK206 info page (for 007 lab sessions only)!

[20250424] Soft reminder: Lab Assessment 1 @202500420-0800!

Lab Session

I am using Takahashi Method for these slides (Actually, I broke that method by adding diagrams and long codes because I think my students need them). You will find them hard to understand if you do not attend my sessions. So, that is the 'advantage' I gave to those who actually listen in class 😎

- Lab Briefing
  Slides
- Intro to CAD Tools and HDL
  Slides
  Online Session (Video)
- Verilog Basics
  Slides
  Online Session (Video)
  - [Extra]
    Online Session (Video) (Partial... was stopped due to low number of students)
- Combinational Logic
  Slides (P1)
  Slides (P2)
  Slides (P3)
  Slides (P4)
  Slides (P5)
- Sequential Logic
  Slides (P1)

***note**: these are from 202324s2 academic session. they should be very similar this semester, but some details may be added or removed. i usually post an updated version at the end of the week.*

- Sequential Logic
  Slides (P2)
- State Machine
  Slides
- Simple Digital System
  Slides

Verilog Coding Rule

This is the coding rule that I impose on my students. You will be penalized during assessments if it is not adhered to.

1. One file for one module
   - **RULE**: 1 file 1 module
2. **File name must be the same as module name**
   - **RULE**: file name === module name (.v)
3. All circuit (module) must have a testbench (tb)
   - tb is a also module (so, separate file)
   - **RULE**: All module MUST have a testbench
   - **RULE**: Tb name === module name + _tb

4. Use Verilog95 module declaration
    - Port list contain names only (separate input/output declaration)
    - Port connection(s) MUST BE specified using ordered list
    - **RULE**: Port connection(s) by ordered list ONLY!
5. Modules for combinational logic should only use wire/assign statements
    - reg/always reserved for sequential logic and testbench modules
    - **RULE**: comb. logic use assign/wire only!
6. Only basic logic gates are allowed
    - Can only use AND/OR/INV in your logic implementation
    - XOR logic is allowed for **lab project only**
    - **RULE**: allowed operators AND, OR, INV
7. Assign statements can only have ONE binary operator
    - Multiple bitwise inverts (~) are ok (they are unary operators)
    - **RULE**: 2-input logic gates ONLY
8. ALL nets (wire/reg) MUST BE declared.
    - some compiler may allow using without declaration
    - for my assessments, they MUST BE declared
    - **RULE**: All signals @wire must be declared!

Lab Project (202425s2) Requirements

This is also shared in Google Doc format (link available in Google Classroom).

nmk206-202425s2_labproject.txt

```
-----------
LAB PROJECT
-----------

You are required to implement a soft-processor core (HDL-based) with
the
following minimum requirements:
  - 8-bit microprocessor (instruction size, register size, etc.)
  - 8 general purpose registers
  - 8 ALU functions
  - basic instruction set
    = move data between registers
    = perform basic ALU operations
    = load register with immediate value

These requirements are necessary for submission and minimum grade B.
More functionality means better grades:
  - 16-bit/32-bit microprocessor
  - carry circuit for adder (>8b)
  - integer multiply/divide circuit (structural code - NOT behavior)
  - bit-level manipulation (towards microcontroller)
  - instruction fetch unit and memory interface

Note#1: Auto-0 for downloaded codes!
```

```
Note#2: This is a group assignment, but marks will be evaluated
individually.

Assessment deliverables:

1) Verilog source files in a single ZIP file
- make sure only Verilog files are included in the file
- make sure all modules have each a proper testbench
- must be self-checking testbenches

2) Technical Document (Specifications)
- not more than 10 pages, no cover page (only list of members' names)
- content:
  = short summary of features
  = block diagram of design
  = list of instructions (description and op-code)

3) An online demonstration / Q&A
- not more than 20 minutes
- content:
  = short summary of what has been implemented
  = if completed, demonstrate running the top-level testbench
  = if NOT completed, demonstrate running component-level testbenches

PROJECT DUE: Lab Session@W14/14 (Item 1&2). Item 3 TBD.

Extra Info:
- each student may email in a contribution percentage information:
  = list all group members (specify project contribution percentage of
each)
  = percentage values should total up to 100% (may use fraction e.g.
1/3)
Note: this is optional,but if a member decides to do this, please
advise
the others in group to do the same
```
