

# Slackware Application

Running applications (@software) on Slackware... most are applicable to all distributions.

## 'Hidden' Application

There are a couple (a few?) of applications that I thought have great features but relatively unknown (I only knew about them after looking for specific solution). Here they are:

- xfig - nice app to create figures for use with latex
- xpaint - can do screen capture (xpaint - snapshot)

## Apache (http server) Setup

Modify config file:

- change document root to a folder my main user have full access
  - also create a link to it from my user account
- allow php to be indexed ⇒ add to directory index in dir\_module
- enable php (towards the end of the file) ⇒ include mod\_php.conf
- enable mod\_rewrite (API server?) ⇒ LoadModule ... mod\_rewrite.so
- optional: set serveradmin email and servername
- optional: to only serve locally, set listen localhost:80 ???
