## **Slackware Desktop**

Little tips for better Slackware desktop experience. Most of these can be used in other Linux distributions as well.

## Mplayer (gmplayer) runs without video window

Double-clicking in file manager (Thunar) shows no video (audio is ok, so program is running). Running mplayer from command line is fine. Turns out gui version is gmplayer - running from console shows this error message

Failed to open VDPAU backend libvdpau\_va\_gl.so

So, just edit ~/.mplayer/gui.conf, find the line for vo\_driver and set it to gl. Show be ok after that... at least in my case it is.

## **Mplayer and Xscreensaver**

Note: **NOT** tested... just found this

Although the mplayer setting to disable xscreensaver has been selected, xscreensaver still runs!

Possible Solution: Edit ~/.mplayer/config

heartbeat-cmd="xscreensaver-command -deactivate >/dev/null 2>&1"

## Login issue

When using xdm, login fails sometimes with error message ... Unable to establish ICE listener...

append rc.local ← rm -rf /tmp/.ICE-unix/\*
